I can factor perfect square trinomials. 6. I can factor using difference of squares. Solving Quadratic Equations 7. I can solve by factoring. 8. I can solve by taking the square ...

Completing the Square - Germanna Community College

“Completing the square” is another method of solving quadratic equations. It allows trinomials to be factored into two identical factors. Example: $2 + 4 + 4 = (+ 2)(+ 2)$ or $(+ 2)^2$ To complete the square, it is necessary to find the constant term, or the last number that will enable factoring of the trinomial into two identical factors.
